U.S. DEPARTMENT OF ENERGY
EERE PROJECT MANAGEMENT CENTER
NEPA DETERMINATION

RECIPIENT: University of Wisconsin-Madison

STATE: WI

PROJECT TITLE : Sustainable biomass production on marginal lands using a novel legume/grass mixture

Funding Opportunity Announcement Number	Procurement Instrument Number	NEPA Control Number	CID Number
	GO88073	GFO-09-046p	GO88073

Based on my review of the information concerning the proposed action, as NEPA Compliance Officer (authorized under DOE Order 451.1A), I have made the following determination:

CX, EA, EIS APPENDIX AND NUMBER:

Description:

B5.1 Actions to conserve energy, demonstrate potential energy conservation, and promote energy-efficiency that do not increase the indoor concentrations of potentially harmful substances. These actions may involve financial and technical assistance to individuals (such as builders, owners, consultants, designers), organizations (such as utilities), and state and local governments. Covered actions include, but are not limited to: programmed lowering of thermostat settings, placement of timers on hot water heaters, installation of solar hot water systems, installation of efficient lighting, improvements in generator efficiency and appliance efficiency ratings, development of energy-efficient manufacturing or industrial practices, and small-scale conservation and renewable energy research and development and pilot projects. The actions could involve building renovations or new structures in commercial, residential, agricultural, or industrial sectors. These actions do not include rulemakings, standard-settings, or proposed DOE legislation.

Rational for determination:

The University of Wisconsin proposes to use federal funds to develop a system to produce biomass with little or no nitrogen fertilizer application. They will do this by planting nitrogen fixing legumes along side of the perennial grasses.

This project will include field plot establishment and biomass production, botanical composition and chemical characterization of biomass, and project management and reporting.

This project will take place on previous agriculture fields in the Madison, WI area. It has in the past been used primarily for production of annual grain crops (corn and soy) and has been too wet for alfalfa production. A portion of the harvested biomass will be analyzed for chemical characterization the rest will be composted.

This project will take place outdoors and indoors in a research laboratory in existing facilities, and will involve natural actions to conserve energy through small scale agriculture conservation; therefore a CX B5.1& B3.6 will apply.

NEPA PROVISION

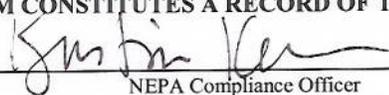

DOE has made a final NEPA determination for this award

Insert the following language in the award:

Note to Specialist :

Eugene Brown 5/26/2010

SIGNATURE OF THIS MEMORANDUM CONSTITUTES A RECORD OF THIS DECISION.
